INSTALLATION GUIDE

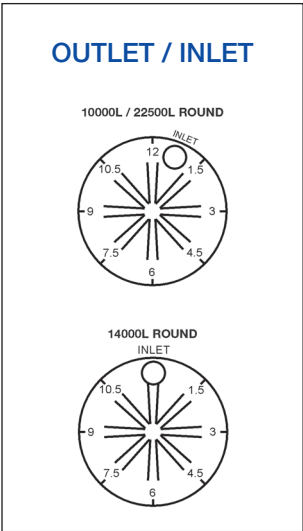

Tanks must be installed on a smooth, solid, level surface - either a concrete slab of approximately 100mm larger than the tank or a boxed and compacted sand base that is at least 300mm larger than the tank.

Ensure that the tank overflow is plumbed into the storm water system or piped away from the tank to prevent it washing away the base material.

Minimum 25mm clearance is required between the tank and any other object.

Flexible hose must be used to connect any rigid pipe work to the tank outlet.

Pipes connected to the tank must not rely on the tank for support.

10000L round	DIMENSIONS:	Height	2350mm
		Diameter	2550mm
		Inlet Ht.	2150mm
14000L round	DIMENSIONS:	Height	2450mm
		Diameter	3000mm
		Inlet Ht.	2240mm
22500L round	DIMENSIONS:	Height	2500mm
		Diameter	3700mm
		Inlet Ht.	2200mm

Capacities and dimensions are approximate due to variable shrinkage during the manufacturing process. Tanks are supplied with a leaf strainer, 90mm overflow outlet, brass outlet with ball valve. In an ongoing commitment to product improvement, Maxiplas reserves the right to change product specifications at any time without notice. THE COLOUR CHART PROVIDES A GUIDE ONLY. COLOUR ACCURACY CANNOT BE GUARANTEED BECAUSE OF LIMITATIONS IN THE PRINTING PROCESS.
